FWS 50.SI

The Schüco Facade System FWS 50 sets a new standard for fabrication and energy efficiency. The Schüco Facade Systems FWS 50 provides architects with a diverse range of design options –including the passive house certified SI (Super Insulation) version– in the popular face widths. Thanks to the new range of glazing supports, very heavy panels are even easier to fabricate and will retain the same high level of load transfer.
New system components streamline the fabrication processes on the construction site: for example, the innovative building attachment system that ensures reliable fabricatio through the elimination of interfaces.
